5. Hash & Payload Analysis

No cryptographic file hashes (MD5, SHA1, SHA256) were observed during analysis. All artifacts represent network-layer or application-layer security events. No payload delivery, file execution, or persistence mechanisms were confirmed.

6. Confidence & Limitations

This assessment is based exclusively on provided web and access log data. No endpoint telemetry, memory artifacts, or file system evidence was available. Severity scoring was derived using deterministic rules combined with semantic similarity analysis.
